

PebbleTray

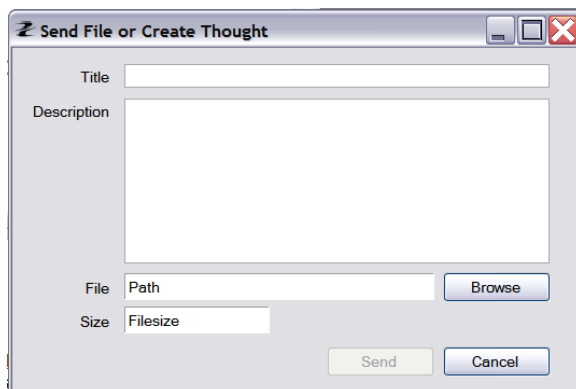

PebbleTray is a desktop application you can download and install on a Windows based computer. It gives you instant access straight from the taskbar to create simple thoughts and upload files directly into your PebblePad account.

Using PebbleTray

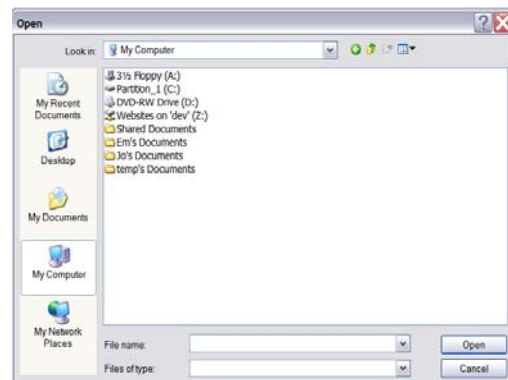

After installation PebbleTray will be available via the task bar

Double click on the icon in the task bar to open the PebbleTray:

You can upload files to your PebblePad account by clicking on the browse button and selecting the file that you would like to upload.

The name of the file that you select will be displayed in the 'File' section of the PebbleTray screen

Enter a title into the 'Title' field; this will be the name of the file in your PebblePad account. You may also enter a description for the file at this point however this is optional.

If you do not want to upload a file but would like to make a record, you can use PebbleTray to create a thought asset and send it to your account. Fill in the Title and Description field then click send.

If you do not have an internet connection you can still create your thought records and upload files. Once you click the 'send' button the files/records will be sent to the PebbleTray upload queue. Once a connection has been established your records will then be automatically sent to your PebblePad account.

* Please note that there is a 50Mb size limit on files for upload.
