

## Turnitin Integration

PebblePad's assessment area, ATLAS, supports integration with the Turnitin plagiarism detection software to allow for originality checking and as an alternative method of adding grades and marking student papers.

Assessors are able to select single, multiple, or whole group submissions to send to Turnitin for checking. PebblePad sends an email as soon as the processing of submissions is complete allowing a user to return to the workspace to view the Turnitin ratings and click straight through to view any of the item's originality report.

The Turnitin integration is included without charge for organisations with an enterprise license of PebblePad. For non-enterprise licensed organisations it is available as an additional service.

It's important to note that the integration is only possible where an organisation is already using Turnitin software under a separate license agreement.
